## Fund features

- Objective to achieve absolute returns in excess of the benchmark over the investment cycle (typically 3-5 years)
- In the absence of finding individual securities that meet minimum risk-return criteria, cash may be held to maximum 25%
- Flexibility to hedge for risk management purposes:
  - Currency exposure of the underlying stock position (net short currency position not permitted)
  - Equity market exposure via exchange traded derivatives (limited to 10% of NAV)
  - Leverage not permitted
- This product is intended for use as a core allocation for a consumer who is seeking capital growth and has a high risk and return profile for that portion of their investment portfolio. It is likely to be consistent with the financial situation and needs of a consumer with a 5-year investment timeframe and who is unlikely to need to withdraw their money on less than one week's notice.

4 Antipodes classification

5 Where possible, regions, countries and currencies classified on a look through basis

6 All metrics are based on gross of fee returns in AUD terms since inception. The upside/downside capture ratio is the percentage of benchmark performance captured by the fund during months that the benchmark is up/down. Standard deviation is a measure of risk with a smaller figure indicating lower return volatility. The Sharpe ratio measures returns on a risk adjusted basis with a figure > 1 indicating a higher return than the benchmark for the respective levels of return volatility
